

UNITHERM™ End Sealant

End Sealant

3 oz Tube
P/N 1535-02080

10.3 oz Cartridge
P/N 1535-02120

Description

Unitherm end sealant is a paste material which becomes a tough, rubbery seal upon exposure to air. Total curing takes about 24 hours, at which time it has excellent resistance to weather, ozone oil, many chemicals and extreme temperatures (-65°F to +450°F).

Important

All Unitherm steam products must have sealed ends to prevent contamination of insulation. Unitherm products are sealed at the factory and it is important that these seals be maintained during storage and that they are sealed upon installation. We will not assume liability for any corrosion or damage to the product caused by such contamination.

Installation Instructions

1. Cut end of product square, expose desired length of tube.

2. Push back installation under jacket to a depth of 1/4".

3. Apply a sufficient amount of End Sealant to fully cover the insulation to a depth of 1/4".

NOTE

3 ounce tube will cover an average of six product ends. 10.3 ounce cartridge will cover an average of 20 product ends.
