*Once you use the **UNICUT™** cutter,
you'll wonder how you ever got along without it.*

UNITHERM™ UNICUT™

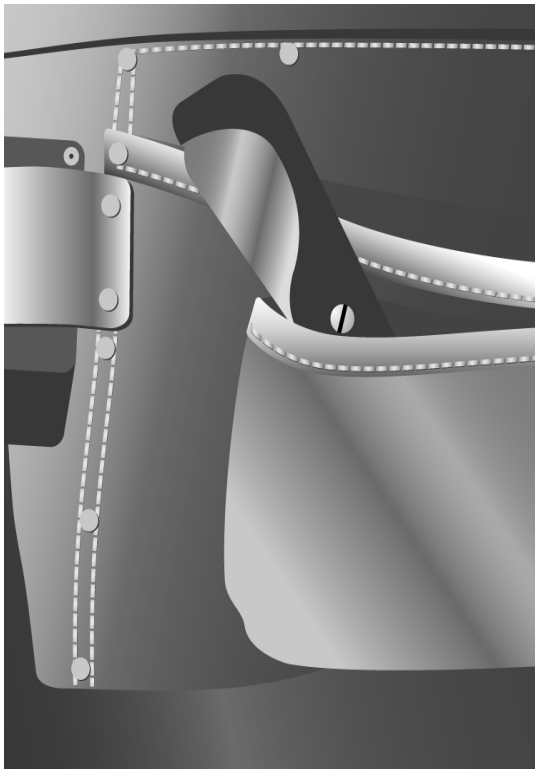

It not only gives you a cutting edge, it gives you a cost edge too.

The UNICUT™ T150 tubing bundle and hose cutter is much more economical than a good quality ratchet cutter.

What's more, a replacement blade on some brands of ratchet cutters actually cost more than a complete UNICUT™ cutter.

UNICUT™ cuts faster than a ratchet cutter.....

Plus UNICUT™ is smaller, lighter and easier to carry.

As the package instructions tell you, the cutting technique for the UNICUT™ is different from other cutters when you're cutting non-metallic tubing and bundles, UNICUT™ requires a slicing action by slightly rotating or rocking the handles on the bundle while squeezing lightly on the handles. After just a few practice cuts, anyone can make fast, clean straight cuts.

This special cutting technique is only required for pre-insulated tubing, pre-traced tubing and plastic pipe. Ordinary cutting techniques work fine for rubber hose and soft tubing.

For easy cutting of Unitherm tubing bundles, Just follow package directions.
